Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:
 - I. Claims 1-6, drawn to a low noise amplifier redundancy receiving system including plurality of receiving chains and switching between two low noise amplifiers in each plurality of receiving chain, classified in class 455, subclass 132.
 - II. Claims 5-7, drawn to a method for proving redundancy in a wireless hub when no data signal is provided by one of the receivers, selecting an alternate low noise amplifier to amplify the associated upstream signal, classified in class 455, subclass 277.1.
 - III. Claim 8, drawn to a low penetration receiving system including time-shared down converter and receiver, classified in class 455, subclass 231.
 - IV. Claims 9-10, drawn to a low penetration receiving system with redundancy including two switches, classified in class 455, subclass 338.
 - V. Claim 11, drawn to a method for low penetration redundancy when no data signal is provided by the receiver when receiving a signal from one of the low noise amplifiers, providing the output of the low noise amplifier to a redundant down converter, classified in class 455, subclass 280.

Art Unit: 2685

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there is no generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2685

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II, III, IV, or V, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
